PROFESSIONAL EXPERIENCE

Principal Engineer — Synthflow AI

Sep 2023–Aug 2023

- First engineer at a 70-person voice-AI startup; helped scale the product and service from pre-seed to Series A.
- Spent most of the role coding Python and Golang for prompting, voice-agent behaviour, telephony, media processing, and backend workflows.
- Shaped AI and backend architecture around rapid iteration, latency, reliability, observability, and cost.
- Led and mentored engineers across AI, backend, DevOps, telephony, and voice technology.

Head of Programming Committee — PyCon / PyData DE

Jan 2023–May 2023

- Co-organised a major Python and data-science conference for approximately 1,500 participants.

Engineering Manager — Explosion AI

Jan 2022–Dec 2022

- Managed a cross-functional team building Prodigy; grew a five-person async team into a predictable 12-person delivery organisation.

Head of Data Science — symaps.io

Jan 2021–Dec 2021

- Owned data-science delivery and technical direction at an eight-person GIS startup.

Co-Founder / Data Scientist — AirPublic

2015–2021

- Built a live analytics dashboard and deployed 40 calibrated air-quality monitoring devices.

Data Science Team Lead — Shell Trading

2019–2020

- Led three data products from prototype to production, including automated updates, data checks, monitoring, and model observability.
- Hired and led five data scientists building models over text, time-series, GIS, and structured data.

NLP Engineer — Full Fact

2017–2019

- Automated approximately 20% of live-news fact-checking using sentence embeddings; owned scoping, implementation, evaluation, and user feedback.

NLP Consultant and Maintainer — Gensim

2015–2017

- Maintained the 14,000-star gensim library and consulted on neural document-classification and parsing systems.
- Mentored five Google Summer of Code engineers delivering major features.

Spark Data Scientist — Aegate

2015–2017

- Analysed pharmaceutical point-of-sale data using Apache Spark.

Java Developer — Barclays Investment Bank

2011–2014

- Automated testing of trading algorithms.

Performance Testing Manager — London Stock Exchange

2009–2010

- Led 14 testers validating trading-system execution within 100 microseconds.

SELECTED TALKS

- "Building Professional Voice AI with Vocode" — PyCon / PyData DE 2024.
- "Prompt Engineering with LangChain" — PyCon / PyData DE 2023.
- "Ensemble programming and data validation with Pydantic" — PyCon / PyData DE 2023.

EDUCATION

MA Mathematics, University of Georgia · BA Mathematics, University of St Andrews

10+ YEARS IN AI & ENGINEERING

Hands-on GenAI engineer and former first engineer at Synthflow AI. Spent most of the role coding production voice-agent systems while helping the company scale from pre-seed to Series A.

CORE STACK

Languages
Python · Golang · Java

GenAI
LLM applications · Agentic workflows · Prompt engineering · LangChain · RAG concepts · Model evaluation

AI / NLP
Sentence embeddings · Information retrieval · Document classification · Topic modelling · Annotation workflows

PRODUCTION ENGINEERING

Backend systems · System integration · Automated testing · Data pipelines · Reliability · Latency · Monitoring · Observability · Data validation · Cost awareness

CLOUD, DATA & DELIVERY

Cloud
AWS · GCP · Azure · Cloud Functions

Containers
Docker · Kubernetes

Data & streaming
SQL · NoSQL · dbt · Kafka · Pub/Sub

Delivery & security
CI/CD · Git · Jira · Jenkins · Ansible · IAM · Service accounts

INDUSTRY

Voice AI
Financial services
Trading systems
Open-source NLP
